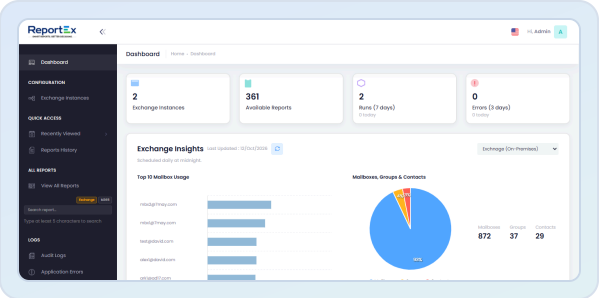
ReportEx

SMART REPORTS. BETTER DECISIONS.

Centralized Exchange reporting without the scripts

ReportEx gives IT, security, and compliance teams instant visibility into Exchange Server and Exchange Online (Microsoft 365) from one web-based dashboard. No PowerShell scripts to write. No code to maintain. No guesswork.



350+ ready-made reports | **9** report categories | **On-prem & M365** | **30-day free trial**

350+
Purpose-built Exchange & M365 reports

9
Report categories covering ops to compliance

0
Custom scripts required to get started

CSV
Export for analysis, audits, and reviews

Challenges without dedicated reporting

- Manual PowerShell and one-off exports that are slow and error-prone
- No single view across Exchange Server and Exchange Online
- Inconsistent report formats that weaken audits and reviews
- Risky configs (external forwarding, inbox rules) found too late
- Permission sprawl and group hygiene that are hard to track
- Limited history of report runs, errors, and admin activity

Why teams choose ReportEx

- Connect on-prem Exchange and Microsoft 365 side by side
- Run 350+ ready-made reports across 9 categories
- Customize columns and filters, then export results to CSV
- Surface inactive mailboxes, empty groups, and risky settings fast
- Support security reviews with permissions, audit, and change history
- Sign in with Windows credentials through a modern web UI

Built for the way Exchange admins actually work

One pane of glass
Manage Exchange Server and Exchange Online instances together. Stop switching consoles and stitching exports.

Zero-code report library
From mailbox lifecycle to mail flow, licenses, and compliance, reports ship ready to run and stay configurable.

Security & compliance
Track permissions, audit activity, and flag risky configurations before they become incidents.

Execution health
Monitor recent report runs, connection status, and application errors from the dashboard.

History & audit logs
Revisit report history and maintain a transparent record of system and user activity.

Local, lightweight store
Runs with a local SQLite database for reliable storage without external database dependency.

Explore the report library

350+ purpose-built reports across **9 categories**, each configurable to show exactly what you need.

Mailbox Reports
Health, usage, and lifecycle
- Inventory, storage, activity, archives
- Inactive mailboxes; user and shared views

Group Reports
Clean, accountable distribution
- Inventory, membership, and ownership
- Empty and oversized groups

Mail Flow Reports
How mail moves through the org
- Message tracking and delivery status
- Delayed, deferred, and failed mail

Permission Reports
Who can access what
- Folder and administrative permissions
- Send As, Send on Behalf, Full Access

Security Reports
Find risk before incidents
- Inbox rule and external forwarding risks
- Policy and security change history

Auditing Reports
Evidence for reviews
- Admin, user, and mailbox access audits
- Configuration change audit

Compliance Reports
Retention and policy posture
- Retention and holds visibility
- Evidence for compliance reviews

Mail Traffic Reports
Patterns across the organization
- Traffic trends and top communicators
- External mail traffic visibility

License Reports
Mailbox licensing clarity
- License assignment visibility
- Usage aligned to mailbox inventory

From connection to insight in four steps

01
Connect
Point ReportEx at Exchange Server or Exchange Online. Manage multiple instances from one dashboard.

02
Choose
Browse all 9 categories, from Mailboxes and Groups to Compliance, Mail Traffic, and Licenses.

03
Customize
Select columns and filters so each report shows only the fields that matter to your team.

04
Generate & act
Run the report, review results, export to CSV when needed, and move on with confidence.

System Prerequisites
From ReportEx System Requirements: Windows install with Administrator access.
- Install on any Windows machine
- Administrator credentials required to run
- Windows Administrator account on install server
- Admin permissions required for installation

Platform highlights
- Exchange on-prem and Microsoft 365 support
- Dashboard with health and recent runs
- Report search, history, and quick access
- Audit logs and application error tracking
- Windows credential sign-in via web UI
- Local SQLite storage, no external DB

Who it is for
- Exchange and Microsoft 365 admins
- IT ops managing hybrid mail
- Security teams reviewing access risk
- Compliance owners preparing evidence

Demo Mode: 30-day full evaluation, then access scales down until licensed.

Simple licensing
Priced per installation. Choose monthly flexibility or save with an annual plan. Purchase from the Hosting Controller Marketplace.

MONTHLY
~~$70.00~~
$35/installation/month
Billed monthly

ANNUAL (BEST VALUE)
~~$60.00~~
$30/installation/month
Billed yearly

Stop scripting. Start seeing.
